

* Any undo-redo operations in real-time cases:

⇒ We should be using the **Array Deque**.

Important Methods of
Real Systems (System Deque)

offer() → Add safely
poll() → Remove safely
peek() → View next
addFirst()/addLast() → Deque operations
removeFirst()/removeLast() → Undo / Redo

* When to use what?

FIFO Processing → Queue
Priority Handling → Priority Queue
Undo/Redo → Array Deque
High Performance → Array Deque

Avoid Stack → Use Deque
(Legacy Class)

Legacy Class : → HashTable <K, V>
(Array of lists)

HashTable<Integer, String> ht = new
HashTable<>();

ht.put(106, "Veekha");

ht.put(117, "Keerthana");

ht.put(128, "Aamna");

ht.put(99, "Kanika");

ht.put(101, "Thamasha");

ht.put(100, "Soundarya");
