

Association in Java

The relation between class & objects inside an application or project is known as association.

Patient	Information	Payment
S patient Name	C block No	d 2mFes
i patient Age	i floor No	d reg Fees
S date Of Arrival	i room No	d bal Amt
S disease	i bed No	

Parameterized Constructors

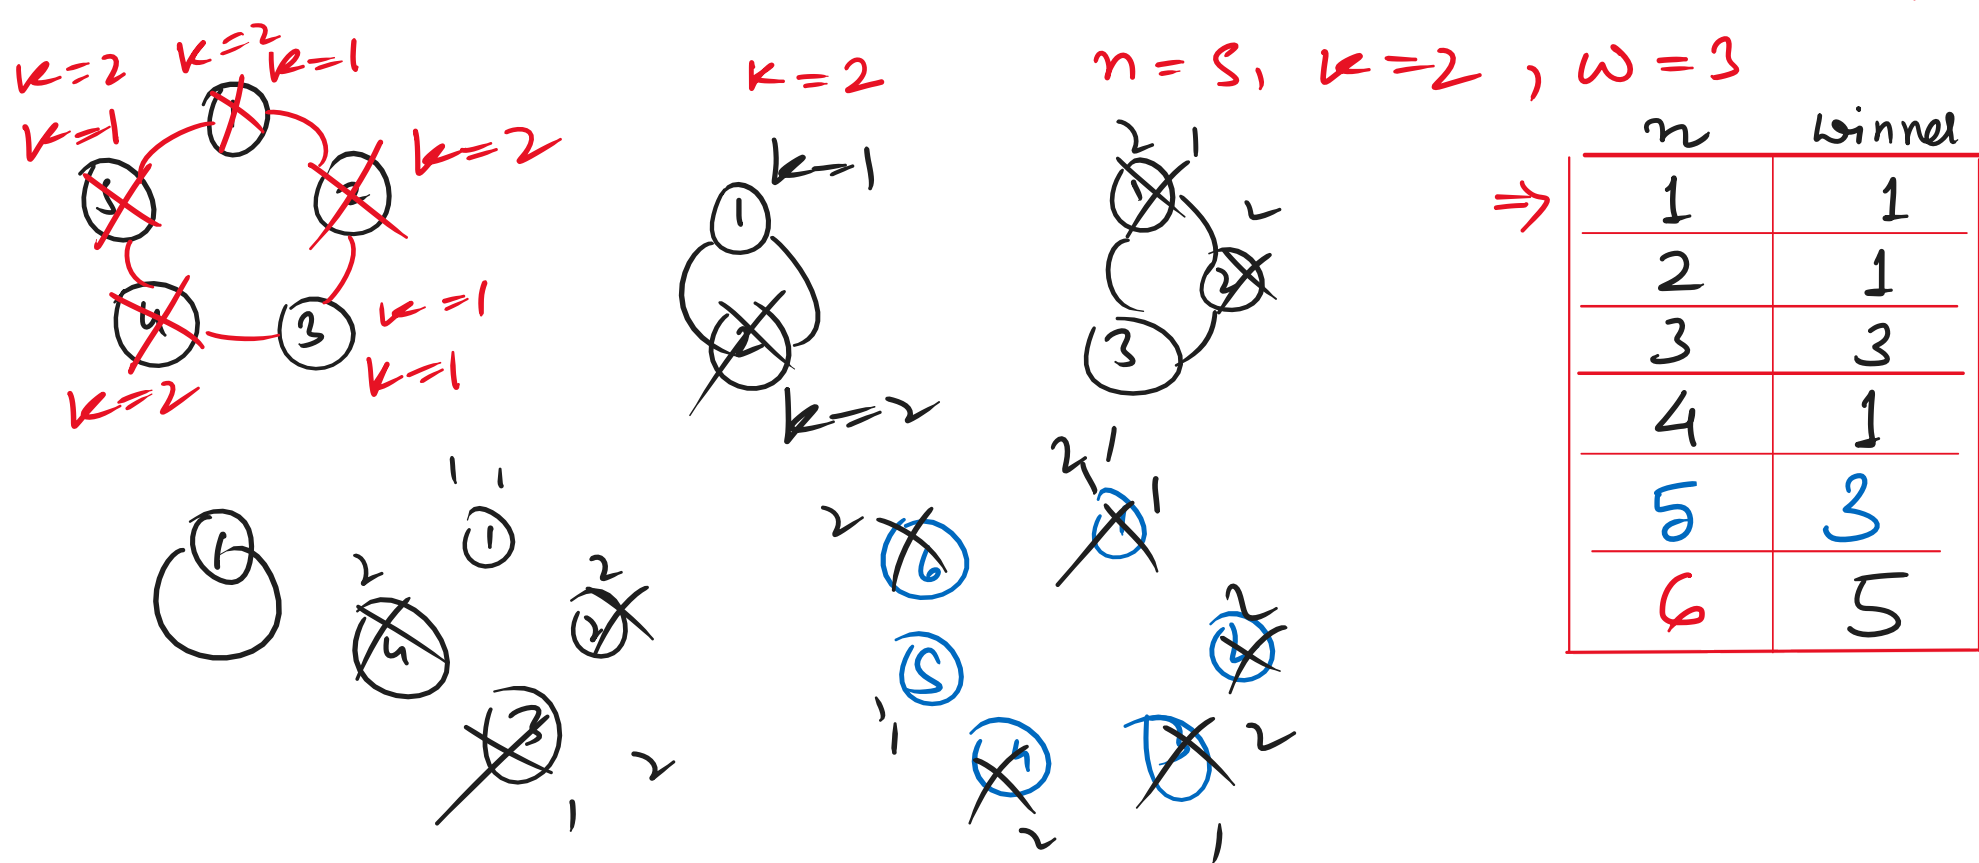

patientDetails()
ps. { displays everything }

Constraint: You cannot use extends

(1823) Find the winner of the Circular game
(Coding Ninjas) (Nankai 360) Josephus

[n = 5 , k = 2 , w = 3]

7-8 yrs
3.5 LPA
5 LPA
7 LPA
14 LPA
46.5 LPA

① Circular Arrangement → Recursion (n → n-1)

Solve (n, k) → Solve (n-1, k)

Solve (2, k) → Solve (1, k)

Solve (3, k) → Solve (2, k)

③ 1+k = 1+2 = ③

Solve (4, k) → Solve (3, k)

① 3+k = 3+2 = 5 % 4 = ①

Solve (5, k) → Solve (4, k)

③ 1+2 = ③

Solve (n, k) = (Solve (n-1, k) + k) % n

Instance Initializer Block (IIB): { }

- * IIB runs before constructor.
- * Executes for every object.
- * Useful for common setup logic or passing data to every object.
