(Nested) Classes or Inner Classes) *****

* When we have a nesting scenario in classes, they are called Inner or Nested classes.

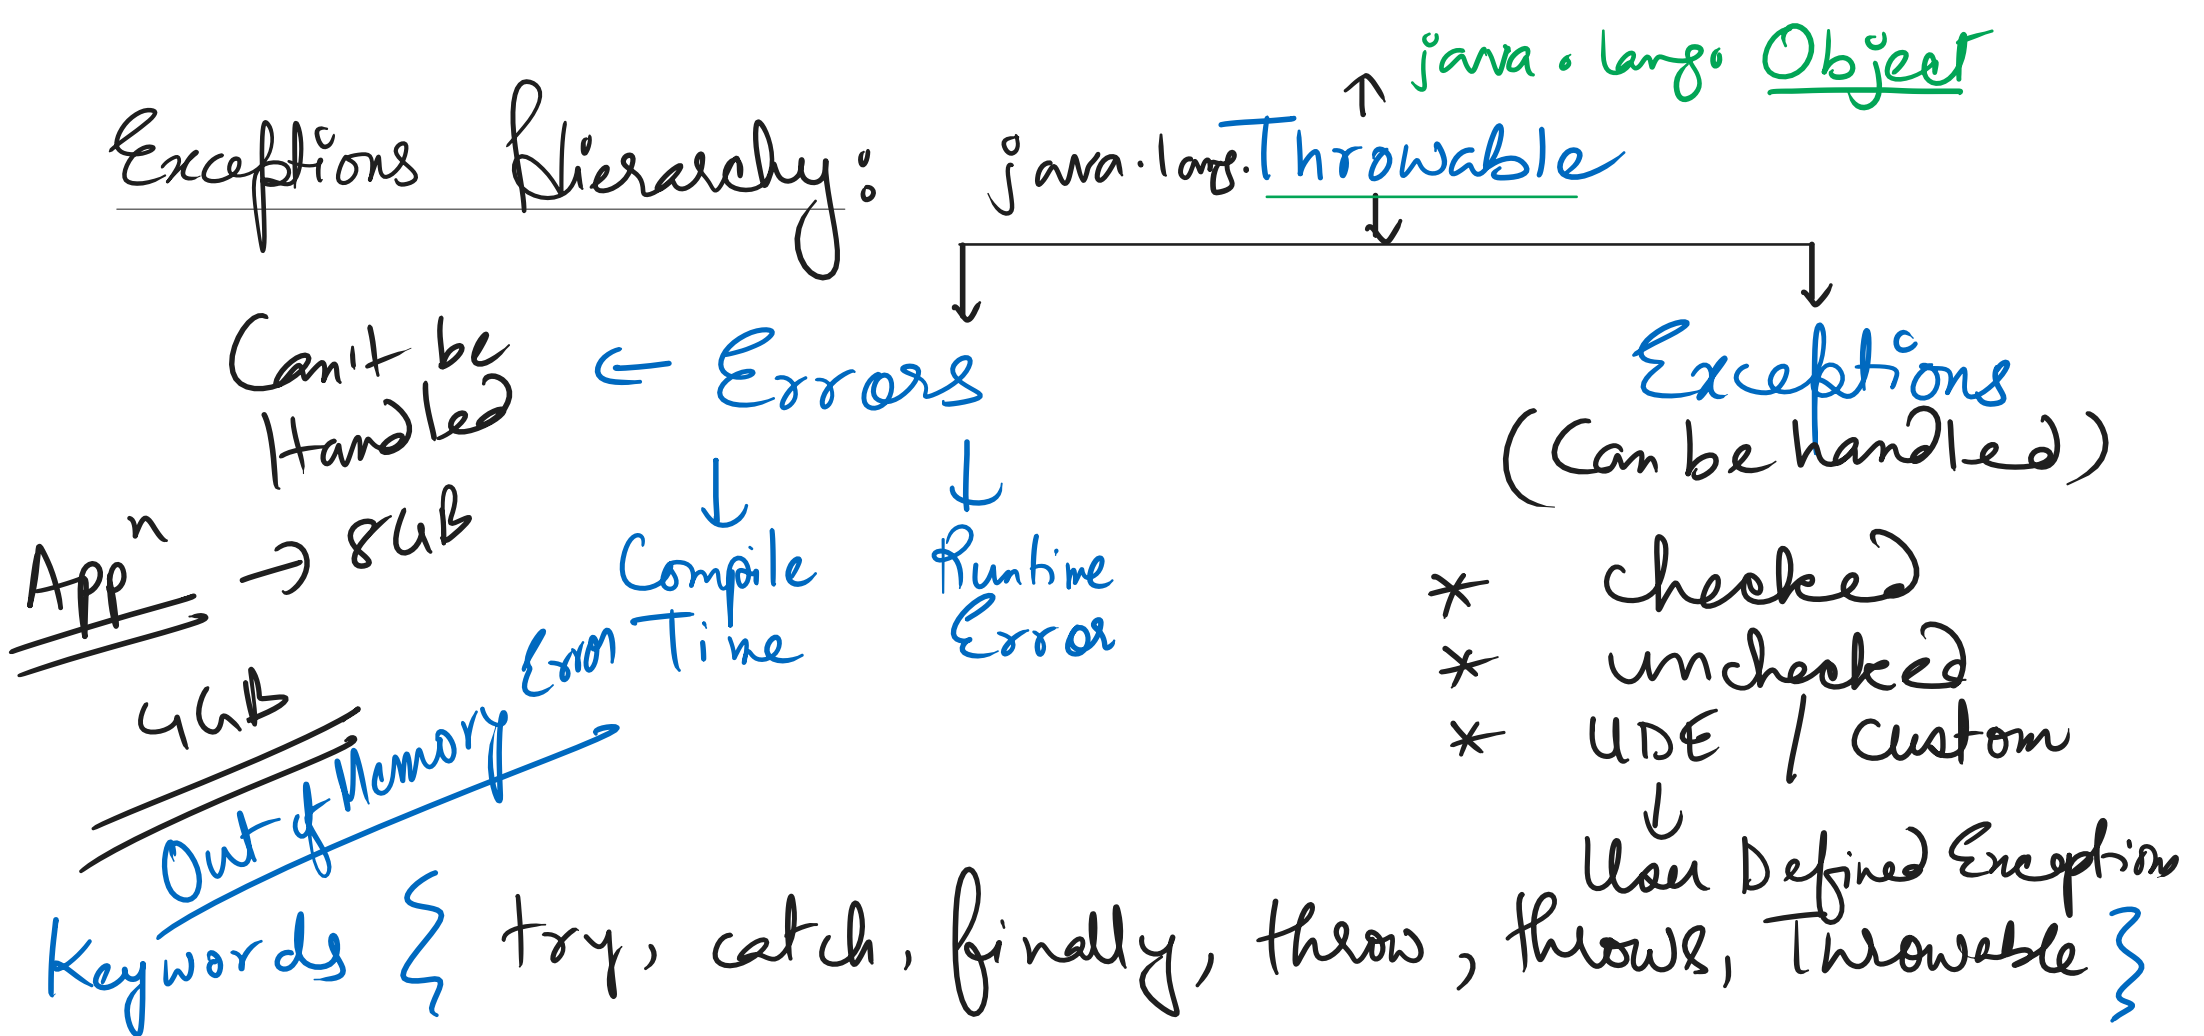

Types:

- (i) Normal Inner Classes | Member Inner Class
- (ii) Static Inner Classes
- (iii) Local Inner Classes
- (iv) Anonymous Inner Classes (***) Imp)

Anything that disturbs / disrupts the normal flow of execution of code, is called an exception.

The process of gracefully (with a smile 😊) handling the exceptions and giving a customized message to the user is called exception handling.

C++	Java	Python
try {	try {	try:
{	{	
catch() }	catch() }	except:
}	finally }	finally:
destructor();	,	(23189)
